Hitachi releases multi-talented new yellow ink: Best solution for returnable bottles during the Cold Fill process with different types of can for strong contrast

Balancing act between efficiency and sustainability: Ecological evolution forces producers to use returnable bottles in production process

In the context of worldwide ecological rethinking, producers have to find ways for the balancing act between efficiency and sustainability. Especially in the bottling process of liquids, the use of returnable bottles is increasingly high. Due to new requirements for efficient production, flexible solutions are desired.

Hitachi offers an all-in-one solution for more flexibility in the filling process

The new yellow ink was developed especially for printing on returnable bottles during the Cold Fill process. The ink is able to penetrate a thin layer of condensation that occurs when the bottle is filled with beverages. It is designed to be washable with caustic wash during the cleaning process for returnable bottles. Internally called JP-Y109, it guarantees excellent adhesion with most kind of plastics. Various types of cans (steel, aluminium etc.), containers (paper, plastic, etc.), Film (Nylon, PET, etc.) PVC pipe, and materials (plastics, steel nonferrous metals) are supported.

When it comes to the development of sustainable systems under stable conditions, customers can benefit from Hitachi's high quality solutions. Hitachi Inkjet products and services stand for stability, reliability, trust and quality.
